PROJECTS

Emergency Health Monitoring System

- Designed and developed an IoT-based system to continuously monitor vital health parameters such as heart rate, temperature, and blood pressure. The system uses sensors to collect real-time data, which is transmitted via a microcontroller to a cloud platform for analysis. Alerts are automatically sent to healthcare providers in case of emergencies, ensuring prompt medical intervention. The system features a user-friendly dashboard and is scalable for large-scale implementation in hospitals or elder care facilities.
